700+ PATIENT REVIEWS

GARIMA TALWAR, DDS · TOP DENTIST, WASHINGTONIAN

IN THIS GUIDE

Four things worth knowing before you decide

01 The implant, explained

p. 5

What is actually placed, who is a candidate, and how six months of treatment is sequenced.

02 What treatment costs

p. 10

Fees line by line, full-arch ranges, and the cost of ownership over twenty years.

03 Results from our practice

p. 18

Five patients treated in Ashburn, each with their own account of the process.

04 Common questions

p. 24

Price, coverage, comfort, longevity, age, and why not simply a bridge.

YOUR CLINICIAN

Garima Talwar, DDS

Dr. Talwar brings many years of specialist expertise to Esthetique, and her dedication to cosmetic and full mouth reconstructive dentistry has delivered life-changing results for countless patients across Ashburn and Northern Virginia.

- ★ Diplomate, American Board of Prosthodontics
- ★ Fellow, American College of Prosthodontists
- ★ Faculty of Dental Surgery, Royal College of Surgeons of Glasgow, UK

3 · Esthetique Dentistry, Ashburn VA

01

The implant, explained

What is placed, who it suits, and how the six months are spent.

One tooth, three components

The fixture

A titanium post placed where the tooth root used to sit. Over three to six months bone grows tight against its surface and locks it in. This is the process called osseointegration.

TYPICAL FEE

\$2,000 – \$2,800

Northern Virginia regional averages for 2026. Your own fee follows the diagnostic record. See the note on the final page.

The abutment

The connector that rises through the gum to carry the tooth. Milled to the contour of your own gum line, which is what keeps the margin invisible at the front of the mouth.

TYPICAL FEE

\$450 – \$800

The crown

The visible tooth, milled in zirconia and shaded to the teeth beside it. It is the part that wears, and the part most likely to be renewed once in the life of the implant.

TYPICAL FEE

\$1,600 – \$2,400

What the consultation actually measures

- Bone volume and density at the site, measured from a 3D CBCT scan, never estimated from a flat X-ray
- Gum health: active disease is treated before an implant is placed, never around it
- Medical history: diabetes control, bisphosphonates and smoking affect healing far more than age does
- Bite force and grinding habits, which set the crown material and whether a nightguard joins the plan

How the case is planned

01

3D CBCT imaging

A low-dose scan renders the jaw in three dimensions: bone height, bone width, the sinus floor and the path of the nerve. The implant is chosen against real anatomy rather than a flat film.

No guesswork about bone

02

Fully guided surgery

The plan is converted into a printed surgical guide that fixes angle and depth before the first instrument touches bone. Smaller openings, and a restoration that seats as designed.

Placed to the plan, to the degree

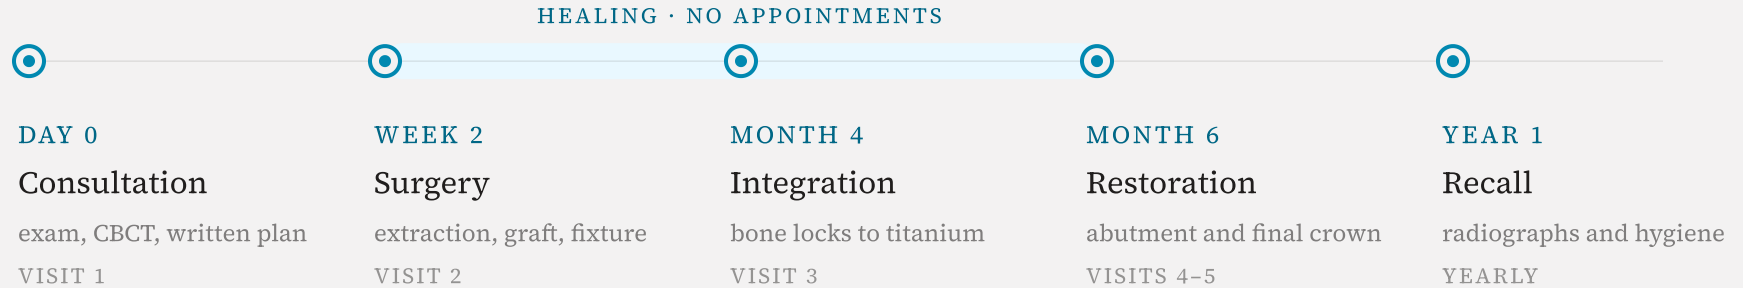

03

Same-day provisional

Where bone quality allows, a temporary tooth is delivered the day the fixture is placed. You do not leave with a visible gap while the implant integrates beneath it.

You never leave without a tooth

Six months, four to six visits

A single uncomplicated tooth runs about six months from consultation to final crown, and most of that is healing rather than appointments. A site that needs grafting adds three to four months before the fixture goes in.

02

What treatment costs

Every line item, and what the same tooth costs over twenty years.

dentistry

The three price bands

ONE TOOTH

\$3,650

Single implant and crown

Extraction, fixture, abutment and zirconia crown. Up to \$6,950 where the socket needs a graft first.

Starting figures for Northern Virginia in 2026, shown for orientation. The following pages break each band into its line items.

A FEW TEETH

\$8,500

Two implants, three teeth

Two fixtures carrying a fixed three-unit bridge, to \$13,000. Neighboring teeth are left untouched.

A WHOLE ARCH

\$24,000

Fixed full arch, per jaw

Four to six implants under one fixed prosthesis, to \$38,000. Overdentures start near \$12,000.

One tooth, line by line

STAGE OF TREATMENT	2026 RANGE
Extraction of the failing tooth	\$250 – \$650
Socket preservation graft	\$500 – \$1,200
Implant fixture, guided placement	\$2,000 – \$2,800
Custom abutment	\$450 – \$800
Zirconia implant crown	\$1,600 – \$2,400

START TO FINISH **\$3,650 – \$5,750 without a graft · \$4,150 – \$6,950 with one**

Consultation, exam and CBCT scan are complimentary.

Several teeth, or a whole arch

TREATMENT

2026 RANGE

Two implants carrying a three-unit bridge	\$8,500 – \$13,000
Implant-retained overdenture, per arch	\$12,000 – \$22,000
Fixed full-arch prosthesis, per arch	\$24,000 – \$38,000
Sinus lift or ridge augmentation	\$1,800 – \$4,500
Intravenous sedation	\$600 – \$1,200

A fixed arch does not come out. An overdenture snaps onto two to four implants and is removed for cleaning: cheaper to place, more to maintain.

The same tooth over twenty years

One missing premolar at the fee ranges above. The implant carries a single crown renewal; the partial denture needs relines and remakes; the bridge is remade twice, and often takes one of its two supporting teeth with it.

Implant, bridge, or denture

	IMPLANT	FIXED BRIDGE	REMOVABLE PARTIAL
Expected service life	20 years and up	8 – 12 years	5 – 8 years
Neighboring teeth	Left untouched	Two teeth cut down	Clasped and loaded
Bone at the site	Preserved by loading	Resorbs under the span	Resorbs, fit changes
Daily maintenance	Brush, floss, recall	Threader under the span	Removed and soaked
Chewing force	Near a natural tooth	Near a natural tooth	Roughly a third

95%

of dental implants are still in service at ten years, among the most predictable procedures in dentistry. The crown on top is the wearing part; the titanium beneath it is usually permanent.

Paying for it

Your dental benefit

Most plans carry an annual maximum between \$1,000 and \$2,500, and many now contribute toward the crown, the extraction and the graft. We file a written pre-treatment estimate so the plan's own number comes first.

Third-party financing

CareCredit and Lending Club Patient Solutions both offer extended terms, some interest-free. Approval takes a few minutes, at the front desk or online before your visit.

Two benefit years

Treatment spans several months, so a plan that renews mid-course can draw on two annual maximums: one for the surgical phase, one for the restoration. Sequencing follows your benefit year.

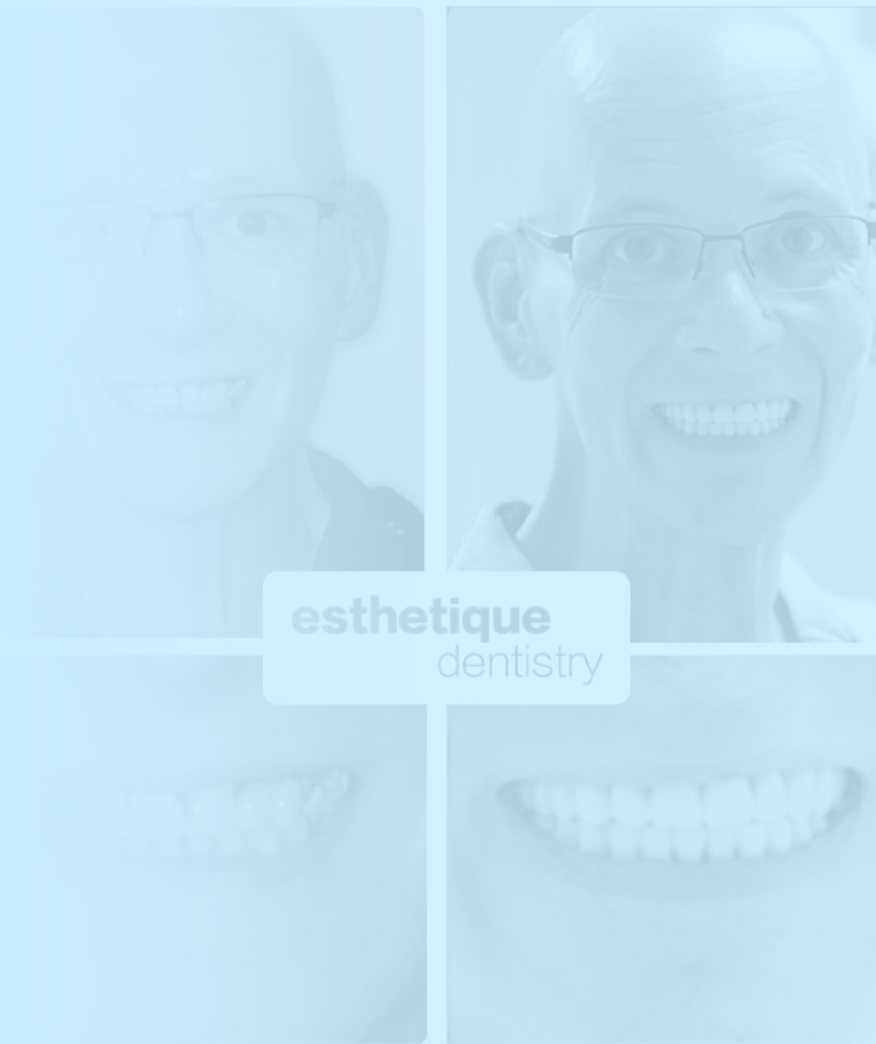

The consultation is free

Your implant consultation, exam and CBCT scan cost nothing. You leave with the findings, every option, the fee for each, and what your insurance is expected to pay.

03

Results from our practice

Five patients treated in Ashburn, in their own words.

03 · CASE ONE · FULL MOUTH
RECONSTRUCTION

“Dr. Talwar made me feel cared for from the very beginning. She is a perfectionist and a true artist who gave me teeth that look natural and feel strong. Now I can smile without holding back, eat the foods I enjoy, and even bite into an apple again.”

BILL M. · FULL MOUTH RECONSTRUCTION

Scan to hear Bill tell it
himself

03 · CASE TWO · FULL MOUTH
RECONSTRUCTION

“Dr. Talwar listened to what I wanted and created a smile that truly looks and feels like my own. My teeth are beautiful, natural, and even better than I expected. I can eat comfortably again, and I am so grateful for the care, talent, and confidence she gave me.”

JESSICA T. · FULL MOUTH RECONSTRUCTION

Scan to hear Jessica
tell it herself

03 · CASE THREE · FULL MOUTH
RECONSTRUCTION

“Dr. Talwar is gentle, caring, and truly listens. My new smile looks natural, and I no longer have to worry about what I can eat, how I look, or hiding my teeth when I speak. She helped me get my confidence and my life back.”

BILL K. · FULL MOUTH RECONSTRUCTION

Scan to hear Bill tell it
himself

03 · CASE FOUR · FULL MOUTH
RECONSTRUCTION

“Dr. Talwar and her team were gentle, kind, and patient throughout my entire journey. They gave me a beautiful smile that lets me laugh, speak, and meet people without covering my mouth. I can chew comfortably again, and I feel happier and more confident every day.”

SUSAN W. · FULL MOUTH RECONSTRUCTION

Scan to hear Susan
tell it herself

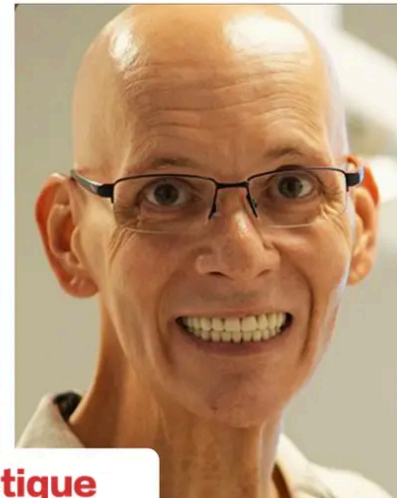

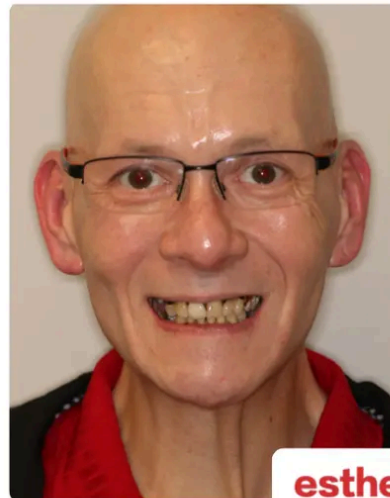

03 · CASE FIVE · FULL MOUTH
RECONSTRUCTION

“Dr. Talwar looked me in the eyes and treated me like a person, not just another number. She carefully explained the process and helped me smile and eat again. Her entire team is warm, knowledgeable, and caring, and I would not trust anyone else with my dental care.”

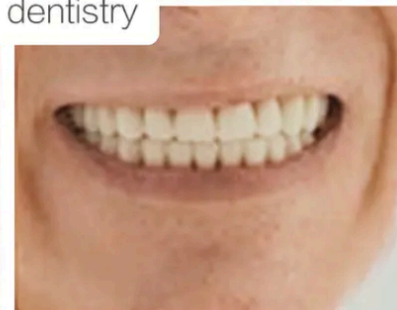

EUSTACHIO W. · FULL MOUTH
RECONSTRUCTION

Scan to hear
Eustachio tell it
himself

dentistry

Price, coverage, comfort

“Isn't it far cheaper abroad?”

Cheaper today, costlier to revise

Often, yes, and frequently on a fixture system no local dentist can service. When a screw loosens or a crown fractures, the revision is billed here at a full fee, and the warranty is a flight away.

“Does insurance cover any of it?”

Usually part of it

Usually part of it. Most plans now pay toward the extraction, the graft and the crown, up to an annual maximum. We file a written pre-treatment estimate so you see the plan's own number before deciding.

“Is the surgery painful?”

Less than the extraction

Placement is done under local anesthetic, with sedation available. Most patients report less discomfort than the extraction itself and manage the next two days on ibuprofen alone.

Longevity, age, alternatives

“How long will it last?”

95% at ten years

About 95 percent of implants are still in service at ten years. The crown is the wearing part and may be renewed once; the titanium beneath it is normally permanent.

“Am I too old for this?”

Age is not the test

Age is not a contraindication. Healing capacity and bone volume are, and both are measured at the consultation. We place implants routinely for patients in their seventies and eighties.

“Why not just a bridge?”

It costs two healthy teeth

A bridge is quicker and cheaper today, but it costs two healthy teeth their enamel and lets the bone beneath the span resorb. Over twenty years it is usually the more expensive choice.

*“The scan tells us what is possible. The
consultation tells you what it costs.
Nothing is decided in between.”*

About these figures

- Fees are 2026 regional averages for Northern Virginia, published for education. They are not a quote or an offer of treatment.
- An individual fee can only be set after a clinical examination and a CBCT scan, and is always issued in writing.
- The cases shown are patients of this practice. Results vary with bone, gum health and healing; no outcome is guaranteed.
- Survival figures are drawn from published implant literature, not from this practice's own records.
